ICI | HotSpot IR Non-contact Thermometer

ICI's HotSpot IR non-contact infrared thermometer ensures accurate and stable body temperature readings; it is particularly effective for taking temperatures of newborn babies and very young children with high mobility tendencies. Readings can be taken as close as 5 cm or as far as 15 cm from target zone. Being non-contact makes for a more sanitary environment and reduces the chance to spread infectious diseases. Temperature shows on the LCD screen. Users can set an alarm for readings considered abnormally high. Onboard datalogger stores last 32 readings. The HotSpot IR fits in lab coats and bags for portability.
